

TN5250 Client Option

With the availability of the TN5250 Client Option, the functionality of DynaComm Connectivity Series® 9.0 (DCS 9.0) is extended to provide access to IBM AS/400 systems. As part of DCS 9.0, the TN5250 Client Option is based on a highly extensible object-oriented architecture and supports multiple emulation sessions from within a single instance of the application. It presents a consistent user interface and leverages the core product's powerful event-driven scripting functions for unrivaled application automation and extensive customization. Not only does the high degree of modularity expand functionality, it also eliminates the expense of unnecessary emulations. Proven stability and excellent performance make DCS 9.0 the preferred business solution for customers who have the need to access multiple hosts in heterogeneous environments.

Product Highlights

- ❖ EHLLAPI
- ❖ WinHLLAPI
- ❖ Hotspot support

Supported Emulation

- ❖ 5250 Model (Models 2 and 5)

Network Connectivity

- ❖ Telnet—included in the core product

File Transfer Protocol

- ❖ FTP

EHLLAPI/WinHLLAPI Support

The TN5250 Client Option includes both 32-bit EHLLAPI and 32-bit WinHLLAPI dynamic link libraries to support Microsoft® Windows® applications requiring HLLAPI interfaces. Your custom applications can also call these libraries directly, to interact seamlessly with 5250 sessions.

FutureSoft's commitment to quality is not only evident in our products but also in our people. The mission of our Professional Support Services group is to ensure that our solutions meet the technical and business objectives of our customers. We provide the tools and information needed for improved productivity. To accomplish this, we offer a wide array of services including: Technical Support, Education Services and Consulting Services.
